

**THE CURLING CLUB  
AT CARBON**

(By Swain Tichborne)

Come get your brooms and to the rink  
And don't stand hesitating,  
For light shines on the pebbled ice;  
Some of the boys are waiting,  
Entombed beneath high,  
And some still the cushion  
As every curler heaves a sigh  
With vivid apprehension.

There's Len, collected, calm and cool,  
Invincible, undaunted,  
And there's Tom, "Tom's" rule  
To take it all for granted.  
And Freddie who supplies your want  
With roast beef, pork or mutton,  
Whose one ambition is to plant  
A rock square on the button.

And Robbie from the land o' cake  
Among his kith and cronies,  
And Jim from the Northern Isles  
Far famed for little ponies.  
And Sandy from the Scottish post  
A curler shrewd and keen;  
And Mac, a sample of the sons  
That haunts from Aberdeen.

There's Annie from the lands below,  
Called the Antipodes.  
A teller from the local bank,  
Who handles cheques with ease.  
And McF who keeps a stock of goods,  
Beyond man's comprehension,  
For powdering noses, cheeks and lips  
And things I dare not mention.

There's Percy from the fount that cheers,  
A magistrate, a preacher;

A barrister, a man of peers,  
A much respected teacher,  
A name sake of the man, they say,  
Discovered gravitation.

And thus was formed the Carbon Club,  
With high class aggregation.

And when the rocks began to roll  
Into a perfect muddle,  
With curlers wriggling here and there  
Like tadpoles in a puddle;  
And backs are shouting "Yes! Yes!"  
Hail! Hail!! or "all the way,"  
And brooms are twisting and fro  
To urge them on, or stay.

Then Mac says, with a pawky smile,  
That's good; that rock is fine,  
Although 'tis far beyond the button  
Or past behind the line.  
And Bob is at a loss to know  
If Mac is in a dream  
Although that spirit has oft times proved  
The backbone of the team.

And after all was said and done,  
Mac finished in the race,  
And would have won, had Mickey placed

The button in its place.

Says Mac, there's not the slightest doubt.

But what we'd won the prize  
If we had only got our rocks  
And brains to synchronize.

So at the final summing up  
We all corroborate  
That Mac's rink would have won the

Work faithfully eight hours a day and you won't have any worry—In time you may become the boss and work twelve hours a day and have all the worry.

CARBON, ALBERTA, THURSDAY, JANUARY 30, 1936

\$2.00 A YEAR; 5c A COPY

**CHRIST CHURCH  
ELECTS OFFICERS**

The annual general meeting of the Church of England (Christ Church), Carbon, was held on Thursday evening January 23rd, the Rev. Selwyn Evans presiding.

The following officers were elected for the current year:

Vicar's Warden, John Atkinson Sr.; People's Warden, W. A. Braisher; Vestry: Messrs. G. Cadman, J. Atkinson Jr., H. Isaacs, S. Mechelle, J. Bramley, C. Smith, C.H. Nash, and R. Greenhalgh.

Delegates to Synod, J. Bramley, Sub. Delegate, H. Isaacs.

**ALEX STEWART INJURED WHEN ACETYLENE TANK EXPLODES**

Driving a heavily loaded truck, Gordon Witmer of Three Hills had the misfortune to overturn the vehicle on the highway near Carbon early this morning. Alex Stewart, who was driving by at the time, stopped to assist the unloading of the contents of the truck, which had taken fire and just about that time an acetylene tank amongst the cargo exploded and Stewart, who was wearing a thin piece of glass was driven through his shoulder blade. The three passengers of the truck, however, were not seriously injured.

Had things gone as he stated, A little stream with lots of steam Has drained the deepest fountains; A little luck with lots of pluck Has climbed the highest mountains. Then's Percy shouting "hit 'er hard" Then "bang" his bones are shattered As here and there all o'er the ice His winning rocks are scattered. He's lying five to count and wants A guard right there—that's swell; But Sammy with a rock to push And the other two to pull, They're set like sticks strung, just like *Uncle* Scion scientific hero, With Percy at the melting point, His chances touching zero.

There's Sandy sipping up the rink Then smoothly plays his cards, He wicks off one of Freddie's rocks And slips behind the justs. Yes! Sandy's rock just did the trick, He changed the winning score, For slipping in behind, so slick, Knocked Freddie out of four.

So when you've got an hour to spare Or want a stick or two, Just drop into the Carbon rink And you'll see something new. For at the consummation of this Gigantic catastrophe, 'Twas hard to know who's who, and why, With such professionalism.

**OFFICERS ELECTED AT ANNUAL MEETING OF SOCIAL CREDITORS**

The annual meeting of the Social Credit delegates of the Didsbury provincial constituency was held at Avenue Hotel, Didsbury, 22nd when the following represented the Carbon Social Credit Group: Messrs. A. R. Fuller, V. B. Hawkins and W. A. Reid.

The officers elected for the current year were:

President, Mr. Prior, Sammynge. Vice Presidents, Mr. Hammill, Carstairs, and Mr. Braisher, Carbon. Secretary-Treasurer, Mr. Wheeler, Acme.

Mr. E. P. Foster, M.L.A., and Mr. C. E. Johnston, M.P., were present and addressed the convention.

**LETTERS TO THE EDITOR**

Sport in Carbon From a Boy's Point of View

The Village of Carbon needs support and interest in sport. It is one of the most backward of all villages in this respect.

One can call a meeting to discuss the promotion of the sport. These meetings must fairly well attend the men who care to place their suggestions before the sport enthusiasts. But what use is this when we get no result?

A meeting to discuss a skating rink, or cabin on December 1st, a small crowd attended but the only result was the appointment of a committee which was to find water. This did, although it took a month. A rink was started shortly after. Other villages have been skating over three months. The first rink was given to baseball last summer. This sport only lasted two or three weeks because no one supported it.

The manner in which the sport of this town is carried on is a disgrace. It does not provide the people with anything to do. It is useless.

The only way this can be prevented is to put up a rink and sell admission by giving each a well organized support. Some say: "It is impossible to do this in a village like Carbon."

I say: "It is possible if we had the support of our citizens."

CYRIL H. POOLE

**BAPTISTE AT THE BONSPIEL**

Under day a frien' of mine,  
It's you I'm goin' to see  
For why don' you give me rink  
See hospial? says he.

"Dove's plenty chair for sit upon  
Or want to sit there?" says he.

And so at la's I 'link I go,  
Dove's no harm.

Small dol' is more foolish game  
I never yet did see.

For all de men was yell so loud

I think shee's mostly "spiel!" —Ex.

**ANNUAL MEETING OF CARBON SCHOOL DIST.**

Jas. Flaws Elected To Board of Trustees

The annual meeting of the Carbon School District was held on Thursday afternoon, January 23rd, at Mr. A. Reid's office. There were eleven persons present including the three trustees.

Mr. J. Atkinson Sr. was elected as Chairman, and appointed H. A. Reid as secretary to take the minutes of the meeting.

The following reports were read:

Principal Report of the Public Schools Inspector, giving excellent report of the rooms provided by J.M. Macdonald, B. Ramsay and Miss Halstead.

There was no report of the High School given by the Inspector of High Schools.

Mr. Reid gave a verbal report of the School Trustee dealing principally with the amounts of the teachers' salaries.

The Secretary-Treasurer's report stated that the school was being maintained with donations payments to the extent of \$4,409.60, now overdue, this being in addition to the amount of \$11,500.00 not yet due. It also showed that there were arrears of taxes to the amount of \$1,000.00.

It was moved by W. A. Braisher and carried, that the Secretary prepare a statement showing how much was due under the tax laws of the province.

Mr. Reid also moved that the School Trustees be recommended to set a regular meeting night each month, so that taxpayers have an opportunity to attend. This was also carried.

At the close of the meeting the Chairman called for nominations for one School Trustee to replace Mr. J. Atkinson, who was returning. The following names were nominated:

Mr. A. Reid, nominated by W. A. Reid and carried, that the Secretary prepare a statement showing how much was due under the tax laws of the province.

Mr. Reid, nominated by Mr. P. Edwards and Joe Skerry.

The election which followed gave J. Flaws 50 votes, and Harry Evans 46, and Mr. Flaws was declared elected.

There were three rejected ballot owing to voters using the X instead of placing a 1 after the candidate.

**BUTTER GETS REVENGE**

STRATFORD, Ont.—The artful head of a hawk mounted as a hunting trophy fell from the wall and "rang" Charles Hooper as he sat reading a newspaper. The sharp prongs inflicted a deep wound in his head and another under his left eye.

**Notice of Claim W. L. Castiglione**

**CARBON BONSPIEL  
GETS AWAY TO GOOD START TUES.**

Held Off Till Late Afternoon, in Honor of King George V.

**20 RINKS ENTERED**

After observing most of the day in mystery and respect for the Late King George V, the Carbon bonspiel opened at the local curling rink on Tuesday at 4 p.m. when Kennedy of Swalwell met Edwards of Carlton, and W. Acme met Gimbel of Carbon in the draw.

There are 20 rinks entered in the bonspiel this year, there being ten local and ten outside rinks. There are 2 rinks from Drumheller, Yavis and Mackenzie; four from Swalwell, Fricker, Goss, Gibson, Powers and Kennedy; four from Acme, C. Smith and G. Way; one from Irricana, Mr. Gallagher, and one from Eastwood, J. McKinstry. Local rinks entered are: Edwards, Gimbel, Bessant, Reid, L. Poxon, C. Smith, Sherry, Reid, G. Way, and G. Green.

The snow is still ample in the bonspiel, and the weather is cold. Many odd and interesting games have been played up to the time of going to press on Wednesday afternoon, a list of the new record games up to that time being given below.

**GREAT CHALLENGE EVENT**

Going into the Sixteens, Kennedy won from Edwards, Way from Gimbel, Sherry from Bessant and Reid from McKenzie. The others received byes.

Going into the eighteens, Reid won from Sherry, Powers and Green from MacGregor.

**ONTARIO LAUNDRY EVENT**

Going into the sixteens, Smith of Acme from Poxon, Gibson from L. Poxon, Yavis from McKinstry, Sherry from Powers. The others received byes.

Going into the eighteens, Reid won from Tricker and Green from Way.

A full report will be published on next week's paper.

**THE CARBON LADIES' DAY**

Alding Lovers' Day is serving lunch throughout the day and a full course meal in the evening, and this convenience is appreciated by the exiles. Giving them your support!

Sam J. Esden returned Monday night after spending the past month at his home in North Battleford. His sister returned with him and will visit in Carbon.

**"I'll Be Frank with You"**

The young man when the embrace was over, "You're not the first girl I've ever kissed."

"And I'll be frank with you," she answered. "You still have a lot to learn."

### Death Stalks The Highway

A recent announcement of the intention of the Federal department of transportation to conduct a campaign to reduce the annual toll of life and limb taken by automobiles and trucks on the highways and roads of Canada should be welcome news to all who use motor-driven power for business or pleasure. The latest news, however, has not been so encouraging. Just published, reveal that in the United States last year over 36,000 lives were lost by accidents in which automobiles and their drivers were the agents of death, in addition to an appalling number who were injured in greater or lesser degree. This means that, roughly, one out of every 5,000 persons in the U.S.A. perishes in the automobile accident each year. While the exact cause of this is not known, it is believed that the most important factor is the automobile accident death rate in Canada for 1935 was comparable to the American loss after allowing for the difference in population of the two countries and the lesser condensation of traffic. In 1934 the Canadian automobile casualty list totalled 1,108 deaths, and 17,988 injured, some slight.

Had 36,000 lives been snuffed out and hundreds of thousands injured there would have gasped with horror. There would have been demands for investigation and the imposition of safeguards to prevent the possibility of recurrence of such an awful catastrophe. But the same does not apply to Canada where the death rate is lower. It is believed that the automobile accident death rate in Canada for 1935 was comparable to the American loss after allowing for the difference in population of the two countries and the lesser condensation of traffic. In 1934 the Canadian automobile casualty list totalled 1,108 deaths, and 17,988 injured, some slight.

However, there are indications that citizens of the United States are becoming aware at a condition of affairs which has become a national menace. This growing concern is largely due to efforts of government, agents, corporations, police authorities and the newspapers, to acquaint the public with facts and figures concerning which footloose andreckless and negligent are to be held responsible.

Already, it is reported, that these efforts, supported by an aroused public consciousness of individual responsibility, is bringing results in sections of the country where intensive campaigns have been staged.

There is reason to assume that similar results can be achieved in Canada, if organizations and individuals will rally to the support of the authorities who have decided that the time has come when an organized effort must be made to minimize the hazards created by recklessness and carelessness.

Recklessness and carelessness, however, are the factors responsible for the majority of deaths and injuries on the highways in this country, on either side of the international boundary.

For many of the accidents that occur on country roads and city streets recklessness must be indicted, and very often criminal recklessness. In this category falls the driver who travels at greater speed than road, climatic or traffic conditions warrant, the driver who passes other traffic in the dark without lights out. It may be legitimate in failing of another to stop the driver who beats the train to the crossing.

With respect to the last-mentioned hazard it is interesting to note that figures just secured from the records of the board of railway commissioners show that in 1935, there were 242 automobile accidents at railroads in Canada, resulting in 114 deaths and 304, an increase of 23 in the number of deaths and 42 in the number of injured.

Carelessness, too, must be marked up as the contributing factor for a large number of these accidents. It may be carelessness while the wheel is in contact with the ground road surface, may be carelessness in driving a road at night with light out. It may be negligence in failing to regularly and carefully inspect the brakes, the tires and the lighting system or in remedying defects when discovered.

And last, but not least there is alcohol. Tests made by Canadian authorities and scientists have demonstrated that the man carrying out a single drink is not as alert as he is normally without it and the man with several drinks inside him is a positive menace to himself, his passengers and those whom he meets or passes.

Alcohol, according to authorities, "plays a major part in the appalling statistics on the roads." They have recognized the need for measures being prepared for distribution as part of the federal government's campaign to ensure greater safety to the users of Canadian highways, one of which reads: "If you must drink, don't drive. If you must drive, don't drink."

### Synthetic Radium

**Cornell University Builds Machine To Produce Rare Metal.**

At a cost of \$5,000 Cornell University has a machine capable of making artificial radium as a substitute for the natural stuff, which cost \$40,000 a gram.

Completion of this machine, a cyclotron, the second of its kind in existence, was announced at Ithaca, N.Y. The Cornell cyclotron is already in operation.

The original cyclotron, a machine which uses a \$200,000 80-ton magnet to produce 10,000,000, to 15,000,000-volt rays was made by Dr. E. A. Segré at the University of California.

Distinguishing goods from sheep is not always easy, for among the various forms there are some quite confusing to the expert eye.

### Strengthening Air Forces

**Canada Buying Four New Tanks For Coastal Defense.**

The air force defence of Canada is to be strengthened in the spring by the purchase of four additional anti-aircraft tanks ordered by the Canadian government from the Blackburn Aviation Company of England.

The new machines are of the same design as the ones supplied to the British naval air service. The machines have an unusual lifting power so as to carry 1,500-pound torpedoes or an equal weight in bombs. They also carry equiptment for aerial photography and for terrain spotting and reconnaissance. A supplementary fuel tank slung in the tricycle crutches will give the machines a cruising radius of 1,000 miles.

The machines will be operated by the Royal Canadian Air Force.

### A Young Man's Country

**Success Can Be Achieved In North Stars With Careful Planning.**

"The north is coming into its own at last," declared Col. James K. Cornwall, who was in Edmonton recently.

"The Peace River Jim" looked into the future and prophesied: "It's a young man's country, a big empire, and surely will prove the salvation of Alberta."

In northern Canada, where the

principal for northern development has

been its mineral potential, there are

alive to our mineral prospects. While

the mineral country is mostly north

east of Alberta, transportation facili-

ties are available.

"Edmonton is in the same position

as regards northern mineral develop-

ment as we were 25 or 30 years ago,

and in my judgment, we can com-

pete the mineral of that city," he

asserted.

"This northland of ours is a young

man's country, a big empire, and

surely will prove the salvation of Al-

berta."

"Forget you have no job. Perfect

yourself as much as possible—physi-

cal and mentally, and then go north-

There will you find your place."

### French Query Service

**Post Office Offers Different Prices For The Varying Questions.**

If you happen to be in France and want to know the date America was discovered, how to make good coffee or obtain a pick disease, just dial 510 on your telephone.

You will be answered by one of the employees of the new "if you please" service, just instituted by George Mandel, Minister of Posts and Telegraphs.

As any boy can dial 510 on any day or night, M. Mandel's encyclopedians will reply. Ordinary queries are answered for a sum of 6 to 15 cents. Twenty to 30 cents are charged for more difficult queries, and special terms are made for a real "poser."

You can also have an errand run by a postoffice cyclist who will deliver packages, collect money, etc., whatever you like to ask. Address: The will be charged for a date of the 35 cents in the day and 70 cents at night.

It is expected that plenty of practical jokers will put delicate questions to the new service. But the better the joke, the higher the bill.

### Institution For Beggars

**Scholars Taught The Correct Places And Manner To Beg.**

A "beggar's academy" has been discovered by the police of Pilsen, Czechoslovakia, the famous bear city.

An empty barn in the nearby village of Skivnany was the seat of that institution which had two adult instructors and twenty-six boy "scholars."

The teachers told their pupils how to look miserable and "mamined," and how to behave as "blind" and "dumb-and-deaf."

Practical exercises were held, and crutches, bandages and other beggarish articles were purchased at a general price.

Lessons were also given for writing begging letters, and instructions were given where and how the individual boys had to beg.

After the scholars had come over to the teachers, who retained one-half and distributed the other half among the boys.

### New Plating Alloy

**Looks Like Pure Silver And Does Not Dissolve.**

Development of a non-tarnishing plating which will not dissolve has been announced by Professor Lawrence E. Stout, of the Washington University chemistry department at St. Louis. The new alloy, composed of 20 to 30 per cent silver and a mixture of tin, copper, zinc, palladium, and gold, will make objects twice as durable as pure silver, polished as well as wears better and does not discolor.

### New Dohlin

**Twenty per cent more horsehairs have sold in Canada this year than last.**

Thus either indicates that good old Dohlin is "coming back" or that he is getting more particular about his footgear. Either explanation points to better times.

### Must Carry Lights

**Pedestrians in France, must carry lights at night.**

Any country has ordered that any one walking along unlighted high ways must carry a lantern, so that they will not get run over.

A camel cannot go without water longer than three days, without losing strength.

### Victoria May See Blueneuse

**Captain Walters Considering Proposing To Visit Pacific Coast.**

Immortal queen of the sailing fleets, may leave her Atlantic home at Lunenburg, N.S., next summer to visit Canada's Pacific coast for the first time.

Captain Angus Walters, skipper of the racing schooner, said he was thinking over a proposition from a Victoria sportsman for a Blueneuse visit to British Columbia waters, and that he made his mind yet.

If he takes it up, the Pacific cruise will be Blueneuse's longest voyage in her 13 years of fishing, racing and barnstorming.

The year-old Captain Walters is looking for the Great Lakes for the summer—her first taste of fresh water—and last year he went to England with her. That last voyage was the longest, far.

It can easily be believed that Blueneuse is on the way.

But about the Pacific jaunt, says Captain Walters: "I don't know. They paint a pretty rosy picture, but we've got to sail six or seven thousand miles to get there. Anyhow, we'll see."

Blueneuse is ready for the trip. After a thorough going over on her return to Lunenburg, she is as seaworthy and fast as ever, Captain Walters believes.

### Pioneer Newspaper Woman

**Faith Fenlon, Who Wrote Of Yukon Gold Rush, Dies.**

Faith Fenlon, pioneer Canadian newspaperwoman whose account of the 1898 gold rush in the Yukon thrilled readers a generation ago, died yesterday at her home in Toronto after a long illness punctuated by periods of semi-consciousness.

Mrs. John N. E. Brown, wife of a well known physician of Toronto. They were married in the little log church at Dawson on the new Year's Day of the twentieth century.

Dr. Brown had gone in with the first civil commissioners of the Yukon and was the first secretary of that commission. He was a member of the commission which organized the first post office in the north.

He was still the first secretary of that commission when he became a dual capacity. At the suggestion of Lady Aberdeen, wife of the governor-general, she joined the field of the Victorian Order of Nurses. But she had also been commissioned to write articles for a Toronto newspaper.

She obtained permission from the government to remain in the Yukon and did so, writing of her experiences continually. It was

was scheduled for eight in the morning but the courier left for the south at seven. Faith Fenlon wrote her story and sent it off.

It was not until the day, the hanging was posted and finally called off. With the help of police she got a half-breath runner who caught up with the courier several days later.

**Climb on the Band-Wagon.**

Join the cheering thousands of "roll-your-owners" who are stepping-up their smoking pleasure by getting back to Ogden's.

You owe it to yourself to enjoy Ogden's Fine Cut, and you can, when it costs so little! Ogden's rolls best of course, with the best papers—"Chanticleer" or "Vogue".

### Terror Of The Air

**New Torpedo Can Travel Four Times Farther Than Fastest Shell.**

An air torpedo, faster projectile, which can travel four times the distance of the fastest shell ever known, is one of two inventions, which may revolutionize warfare.

It is the invention of a young man working under the direction of Arthur Holly Compton, University of Chicago physicist, and recently announced the inauguration of worldwide scientific effort to penetrate the mystery of the cosmic ray.

He said he would lead for Vancouver, B.C., and Dr. J. R. D. St. Onge, a research engineer, will be in charge of the work in the U.S.

Mr. Compton said, "We have to find out what is causing the daily variations in the intensity of cosmic rays. The second was to find out whether the rays travel outward to go through 262 feet of rock. Had greater intensity in the northern than in the southern hemisphere.

**DO YOU NEED A BUILDER?**

**W**HEN you're perhaps in need of a good tonic, wear your normal, and you feel tired-out and weak, take a drop of Dr. Francis F. Nash's "Nash's Tonic," 12 oz.

Dr. Peter C. Remondi, says, "I want to praise Dr. Peter C. Remondi's 'Nash's Tonic' as a splendid system builder. It is of this benefit to the body, to the heart and stomach, and sends to the brain a fine appetite, too, and strengthens the heart and lungs, and gives a fine appetite for its purpose." Buy now at drug stores. Large size, take or liquid, \$1.00.

**Had Good Excuse**

"Annie Mac," said the mistress of the house finally giving way to curiosity. "I notice you have been taking our outfit out to wash clothes with us."

"What do you do with them?"

The negro maid looked up at her mistress with a sheepish grin. "Yes'm," she admitted, "I've been carrying 'em away. I think they make my garbage look so stylish."

**How To Become Efficient**

To win fame and fortune in your business, says Prof. Howard W. Haggard, of Yale University, eat five or six times a day, instead of two or three. He explained tests showed workers are more efficient the three hours after eating.

**ARE YOU NERVOUS, IRRITABLE, TIRED?**

Do your friends secretly play you, because you simply haven't the energy to stand up to them? Are you nervous, irritable, a victim of sleeplessness?

Then the sooner you take PHOSPERINE now, the great British tonic, concentrated energy, and a tiny, tiny, tiny drop a day, the sooner the effect is astonishing.

Take the first dose at first light, and you will find your eyes brighter. You gain new energy. You sleep soundly. You wake thoroughly, and feel rid of depression, pains and stiffness, and utter weariness goes.

Start with a tablet. After a few days, take two tablets a day. PHOSPERINE now is splendidly effective in all ages for fatigue, fatigue, sleeplessness, general debility, reduced convalescence, nerves, anæmic conditions, neuritis, rheumatism, grippe, neuralgia, neuritis and loss of appetite.

Get PHOSPERINE from your drugstore. Price, 25¢ a tablet. Reduced price, 10¢ a tablet. The following reduced prices: 3 sizes, 50¢, \$1.00, \$1.50. The \$1.00 size is in 145s. The \$1.50 size is twice the \$1.00 size.

## Fire Hazards On Farms Can Be Reduced When Proper Precautions Taken

While every person should enlist in the army of fire preventionists, farmers especially, should be careful to prevent fires, says a bulletin entitled "Fire Safety on the Ontario Farms," issued by Harry C. McNaughton, Ontario supervisor of insurance. There is little or no protection on the farm and when a fire starts it is usually a total loss which can never be replaced and the policyholders are the ones to pay for the insurance rates anyway. The loss from farm fires is far greater, too, than the amount of the insurance loss; food supplies are lost; farm families are made homeless and even industries which depend on the farms for raw material are affected.

Most farm buildings are of wood, constructed with little thought for fire safety. The buildings are often inflammable because they contain straw, hay and other materials stored and handled on farms are an easy prey to fire once it takes the incipient stage.

Statistics show that the majority of farm fires are due to combustible roofs, defective chimneys and heating apparatus, lightning, threshing, lanterns, gasoline, and spontaneous combustion.

Many of the methods which have been successful in preventing or controlling fires in urban districts are equally as effective in preventing fires on the farm. Practically every roof fire is preventable and when new structures are erected on a farm, a fire-resistant roof should be installed.

A farmer cannot be expected to remove good wooden roofs, but by building new houses and new roofs when new structures are erected on a farm, a fire-resistant roof should be installed.

Where a farmer is financially unable to do this, he can contact his buildings with fire-resistant roofs, an effective agency against roof fires is the spark arrester, which attached to the chimney stands on guard every hour of day and night to see that fire and fire extinguishers also afford cheap protection against roof fires.

The loss from stoves, furnaces, pipes and chimneys could be eliminated entirely if certain simple means, replacing worn-out pipes, and a more careful use of stoves and furnaces. During the winter season, the heating system of the farm home will be under a long strain and defects will become dangerous and the home if not detected and repaired.

To the efficiency of the lightning rod is attached great importance due to its use to lightning during recent years. In addition to the security and peace of mind afforded by this means of protection, insurance rates are much lower where lightning rods are added.

The introduction of modern machinery on the farm while lightening the burden of the farmer has also tended to increase the fire hazard, particularly at those times when the attitude of many farmers is that, as they have never had a loss by fire, their property is fire-proof, is shattered by the fact that the losses due to threshing operations average one per cent of the total farm fire losses.

No one should smoke or carry matches around the barn during threshing operations. A liberal supply of salt should be kept at hand, a sack of sand or cement held near the eaves of the barn, at least one dry powder fire extinguisher in the engine and a further supply in the barn. Straw or litter should not be allowed to come around the engine, which should not be operated without a spark arrester.

A spraying device is now being used effectively by a number of threshers. By means of water is forced into the bower when threshing. This spray, which does not injure the straw, assists in preventing seeds from falling, the amount of dust reduced, losses are economy when threshing in early fall and fire hazard is eliminated.

Lanterns used in farm buildings should be hung on hooks or wires. As a protection against fire, if a lantern is knocked down or upset, a simple device may be attached to the stem of the lantern, which will immediately extinguish the flame.

In stormy weather, if from 10 pounds of salt are spread on the hay in the stall, its palatability is improved and the danger of heating is lessened.

The rural communities which have at their disposal the protection of a rural or urban fire truck are fortunate indeed, as many serious farm fires have been averted through their efforts.

Some of the fire hazards on the farm may exist at all times, while others occur at certain seasons of the year. It is therefore necessary for the farmer to be always on the alert that his property may be recognized, eliminated or guarded against, if he is to prevent the possible destruction of his property from fire.

### Housing Plan

#### Dominion-Wide Scheme To Promote Building And Reduce Unemployment

A Dominion-wide plan to promote building activity and reduce unemployment was studied by leading Montrealers. The plan is being debated throughout the country by local Chamber of Commerce committees in the form of King cabinet, and Marvin Brown, ex-mayor of Medicine Hat, Alta. It is understood to have the approval of Hon. C. A. Duncanson, Minister of Finance.

The plan would be an effective use of the Dominion Housing Act and those behind it are united in the "Prosperity Housing Association." Mr. Stewart and Mr. Brown are joined by other business leaders and other prominent citizens who themselves constitute a tentative Montreal sub-committee as follows: C. F. Sise, president of the Bell Telephone Company of Canada; D. J. Johnson, president of Canadian General Lines and A. B. Purvis, president of Canadian Industries Limited.

Shum clearance is not included in the scheme which is directly concerned with the building of new houses. It is first, however, in the program to establish co-ordinated working committees.

The working committees will seek to coordinate the work of the various bodies involved in the planning of their plans and take charge of the technical and administrative work. Financing will be done through the Housing Act.

The plan is based on three main foundations: Publicity to include educational work to encourage the building of homes; the technical side, including standards of construction, and the administrative side co-ordinating the entire movement.

### Largest Tree In World

#### Redwood Capable Of Supplying Nation's Needs

Fifteen years of observation, correspondence and collection of data from forestry authorities all over the world convince T. J. Starkey, spokesman of forestry on Oregon State College, that he is qualified to name the largest, most timbered and tallest tree in the world.

Fantastic stories of great trees prompted Starkey to start his strange faith. Many of these stories were greatly exaggerated, while many forest giants shrank in size under investigation.

Sequoia, eucalyptus, fir and cypresses were the classifications of trees selected for comparison to size.

The tallest tree in the world, according to this investigator, is a redwood on North Dyerville Flat in Northern California. It is 364 feet high. The tree, living in a hollow of 100 cubic feet, contains 600,120 board feet, enough lumber to build more than 100 good, substantial, five-room cottages.

### A Remarkable Pawn Shop

#### Just Closed In London After 123 Years Business

Britain's oldest pawnshop, the old Nautical House, in Limehouse, has just closed after 123 years' business. Seafarers of all nations knew this shop. It is said that in its long history it has never had a high stool for four days gathering material for an article on pawnshops.

Many queer stories of London's Chinatown lie behind its closed shutters, which are scarcely disturbed by the passing of time. The announcement: "The Old Established House for Sextants, Ship Chronometers, Marine Glasses, Gun, Revolvers, and Munitions."

Nevada now has an automobile for every 2.9 inhabitants. It marks a rise in Father's importance. So far, in car statistics he figures as 5.

"Women in Paris are now wearing coats of banana skins," says a fashion writer. So far that matter is bananas.

## The SNAPSHOT GUILD CHARACTER STUDIES

With a selftimer on your camera, you can make "character" snapshots of yourself.

Did you ever stop to think that all of us have had a dream at some time to be a stage or screen star? Deny it to see ourselves in pictures—although it may be just a snapshot.

Way back in the days of everybody's camera is that feeling that we have certain points of similarity to some noted actors or actresses. Then too there are certain qualities which seem to have been cultivated which seem to be unique to us.

Now if you want to convince yourself of your ability—confidence—as well as a desire to be a star, you can do so quite effectively with your own camera. Put yours in pictures.

Few people like to take pictures for their personal, informal character snapshots. Special costumes are not necessary, but in some instances it will be the facial expression that tells the story. Then again, there are certain qualities which costume plays a rather important part. A burly cook, sharpened to a point, is a good example of the ture of the character you wish to portray.

You may find it difficult to hold a certain exposure for more than a few seconds so have your camera man have his camera properly to

cased, and ready to shoot before you "go into character."

Suppose that you want to experiment with a selftimer. You can take your own picture. How?

Use a selftimer. A self timer is a device which is attached to the end of the button on the cable release of a folding camera. It is designed to hold the button down for a certain period of time to give you the position before your camera takes the picture. Some camera shutters are built with a self timer which will stand for 12 hours, pour off the tea leaves and add milk and sugar according to taste—and the result is cold tea fit for a king. It is this tea that the King always carries with him on shooting or fishing expeditions.

The King shares with most Englishmen the habit of taking the cold tea when he goes to bed at night.

But the head of the Household of Windsor goes further than the average Englishman inasmuch as he has facilities for making tea installed in his dressing room, ready for any emergencies or for wakeful hours.

## Principles Of Good Farming Were Known And Practiced From Time Of Early Romans

### How Royalty Makes Tea King George Has Own Recipes For Cold Beverage

During a royal "shoot" at Sandringham, a member of the party pulled out a flask and took a drink. The King noticed the action and asked what beverage it was that gave him such satisfaction. "Cold tea," was the reply. The King said, saying, "But I prefer tea, cold water, I may say." "Oh yes sir, I think it is," said the other, "poured off the leaves and allowed to get cold."

"That's not the way," said the King. "My way is the only really good way to have cold tea—it must be made with cold water."

Of course, there was a respectful outburst of dissent, but the King stuck to his point and there and then he produced his secret recipe for "royal tea," and here is the recipe:

Take the ordinary quantity of tea—a teapouch for each person and one for the pot—put it in a jug, and pour in as much cold water as you like. Let it stand for 12 hours, pour off the tea leaves and add milk and sugar according to taste—and the result is cold tea fit for a king. It is this tea that the King always carries with him on shooting or fishing expeditions.

The King shares with most Englishmen the habit of taking the cold tea when he goes to bed at night.

Most significant mark also that this brilliant period immediately preceding our Christian era.

Great as may be the justification for scholars and lovers of literature to celebrate this amazing Roman century, during which Horace wrote, it nevertheless remains a similar justification for farmers. The institutions of agricultural science to celebrate as well, for included among the fourteen illustrious Romans cited were three who sang and wrote immortal verse and prose on agriculture.

Virgil, whose Georgics is considered to be the greatest poem on agriculture ever penned, and who wrote the earliest scientific book on agriculture, and Ovid, who tells us of the plants, herbs, shrubs and trees of those days.

The Romans, during the period of the empire, particularly, had the people then loved and revered agriculture, which they considered, above all other occupations, to be the most honorable.

During the one hundred years in which the empire increased and expanded over many parts of the then known world, and carried with her conquering legions, law, order, good government and good agriculture, which virtues persisted in those countries until to-day, two thousand years afterwards.

The education of the Roman boys and girls of the period was designed to teach them the virtues which were taught to man, to teach him to spin and to weave, boys to plow, sow, reap, and to manage the business affairs of the farm, and, as well, to know how to conduct the various offices of the state, including the very highest, for farmers, above all others, were chosen to fill these exalted positions.

The character of the Roman people was such as to develop a respect for parental authority and for law and order. They were taught to be modest in speech, discreet in behaviour, and as well to be thrifty and self-reliant.

Varro, and Varro, and other Romans of the period, tell us of these things and they set out simple principles of good farming which are as sound to-day as they were then. Of the various kinds of soil, the best, the most fertile, is that which is composed of creos and of brecks of live stock which were suited to the district. Of the use of good, pure seed, and of good, well-bred sires. Of the virtues of good plowing and cultivation.

Of the method of eliminating all weeds. Of detailed methods of conducting efficiently every operation of the farm. They also instruct us in the care of plants, animals, and the management of the farm, and the proper consideration of the people employed.

The annual rainfall, too, was a period of every hour in the working day including rainy days, and of the elimination of idleness.

Again, the great writers enjoin us to consider the pleasure of farming to be a reward commensurate with material gain.—Seale Grain Bulletin.

At Highgate Police Court: "When I first saw him he was out of sight and out of hearing, and the noise he made was simply terrific."

### CROCHET A THROW RUG FOR BEDROOM OR BATHROOM

An order-in-council, published in the Canadian Government Gazette, a loan of \$1,200,000 to the Canadian National Railways for repairing and maintaining their lines in the province of Quebec, was signed by the Hon. John Speeder, minister for this sign. He was fined for running through a red light at 11:30 p.m.

The chickadee is as much at home hanging upside down as it is in an upright position.

## BOARD CONCLUDES INVESTIGATION OF AUTO TARIFFS

Ottawa.—A complete picture of the Canadian automobile industry, its claims for protection and arguments for and against protection is now before the tariff board as a result of the automobile hearing, which ended Jan. 16.

In final submissions to the board representatives of the western board representations of the western provinces called for the time limit on automobile imports should be reduced or removed and argued manufacturers had advanced no arguments to justify protection.

The last word at the hearing was struck from the record by the president of the Ford Motor Company, who said the automobile industry needed protection to the same extent as other secondary industries in Canada and submitted it was now time for Canada to turn back on industrialization after large manufacturing industries had been established here.

Canada could have a healthy automobile industry without any duty protection, Dr. W. A. Cameron, economic advisor to the British Columbia government, told the tariff board.

The automobile industry, Dr. Camerons said, had never tried to get along without protection, but it had developed out of the old carriage industry which enjoyed protection of 33 per cent, and naturally had taken advantage of all the protection it received and increased the time. With no imports now well established, staffed with commercial executives, and enjoying the natural advantage of being on the spot, he believed it could prosper without protection. It would mean that manufacturers and some people would lose jobs but it would help the country in the long run.

Canada's tariff structure placed British Columbia in an adverse trading position, he said. That province had to pay parity for its imports while made in Ontario and got no corresponding benefit from the industry.

British Columbia did not want to destroy the industry of eastern Canada, he said, and the question of tariff protection to be viewed in a broad Canadian spirit. It thought that inasmuch as tariffs bore heavily on the consumer, they should be reduced to and kept at the lowest possible level, not at the level of absolute safety frequently demanded by manufacturers.

Wishart Robertson, representing car dealers, said that with few exceptions, said Mr. Robertson, the maritime provinces desired keenly a reduction in the price of automobiles.

The whole tenor of the automobile companies' argument was "with few exceptions," said Mr. Robertson, ignored the real object of inquiry, lower prices for automobiles in Canada. They made a plea for continued protection and continued high prices.

Prices of cars in Canada were 30 to 50 per cent higher than in the United States, said Mr. Robertson. Prices of parts showed an even greater spread and prices of used cars ranged as much as 100 per cent higher than in the United States.

By regulating, drawbacks, arbitrated valuation, the real protection afforded Canadian automobile manufacturers was much higher than the customs tariff of 20 per cent, he continued. This enabled Canadian manufacturers to sell cars at prices higher than the United States price of imported United States cars.

"I suggest methods of raising the tariff and increasing protection without letting the public know about it," said Mr. Robertson. "The tariff is built on an unsound basis when it is built on that basis."

**Making Thorough Probe**  
Edmonton—Witnesses will be subpoenaed and all evidence possible on the case will be demanded, Attorney-general Hugill said in answering pleas by a delegation of miners relating to the Coalhurst mine disaster investigation which will open at Lethbridge courthouse, Feb. 3.

**Protects Socialism In Britain**  
Toronto.—"Within four or five years there is strong likelihood a moderate form of Socialistic government will be in power in Great Britain," said Marquis of Lothian, noted British political authority, predicting in an address before the Canadian Club here.

## Farmers' Lot Is Improved

### Position Of Canadian Agriculture Better Than A Year Ago

OTTAWA.—The farmer's condition is better now than a year ago and there is reason to hope one year from now the position will be further improved, according to the annual survey just now made public by the department of agriculture.

This annual survey extends to a considerable extent as a guide to farmers in their spring planting.

After a year of comparative stability the wheat situation the review said.

As far as the wheat situation in so far as Canada is concerned is involved at the moment yet this country must still wait to see what is to happen.

It should be noted, however, that in view of the greatly reduced world import demand the wheat produced by a number of countries in 1935 would be difficult of disposal.

"The quality of Canadian wheat has long enjoyed an enviable reputation in the world's market, and the main factor in the success of the sections of the west, but chiefly in the so-called 'park belt,' the quality is liable to be below the average and in such sections it would seem desirable to adopt a system of farm cooperatives to dispose of some of this wheat land to other crops. Fortunately, these sections are better adapted to coarse grains and livestock than are certain other areas that are restricted largely to wheat."

## Bank Employees Shot

### Two Members Of Bank Of Commerce Staff In Vancouver Shot In Holdup

Vancouver.—Police arrested three known underworld characters and their chief, the manager of the holding of the French street branch of the Canadian Bank of Commerce where two bank employees were shot, one probably fatally, by three bandits who escaped with \$1,200.

Mobile chief of police, W. G. Foster announced the Canadian Bankers' Association had offered \$5,000 for information leading to the arrest of the men who may be members of the gang.

William H. Hobbs, former Radisson, Sask., bank clerk, his son, Thomas Hobbs, his wife, former Radisson, Sask., bank clerk, his son, and son, Thomas Winsby, bank manager, to hospital with a bullet wound in his left arm.

Winsby also came from Saskatchewa where he was manager of several branches until transferred here in 1927.

Despite the three arrests officers continued to search the wounded men.

The wounded men were rushed to hospital where it was found the bullet had pierced Hobbs' throat, striking his spine and paralyzing him.

An emergency operation was performed and he was put under an oxygen tent.

Hobbs, 25 years old, was formerly with the Canadian Bank of Commerce at Radisson, Sask. His parents were reported to be living in Edmonton.

## Civil Service Examinations

### Westerners Figure On First Fifteen Of English List

Ottawa.—The civil service commission announced that Aaron B. Hamer, of Kitchener, Ont., topped the English list of 60 successful examination candidates for the eligible class D grade 4 clerks in the government service.

The examination, open only to graduates of universities, was held to establish a list from which men for key positions might be drawn and trained to hold executive posts in the service.

The first 15 on the English list included:

Edward A. Bence, Saskatoon; Russell H. Tabor, Regina; Henry S. Fens and Gordon H. Jones, Winnipeg; Solomon Miner, Regina, and Francis V. Kinahan, Calgary.

## Must Pay Tax

### Civil Servants In Manitoba Drawing Pay From Federal Government Are liable

Ottawa.—The supreme court of Canada decided that Canadian soldiers and Dominion civil servants drawing pay from the federal government in Manitoba were liable for payment of the two per cent income tax imposed by the Manitoba legislature in 1933.

The decision will affect more than 2,500 employees of the Dominion government and members of the permanent militia forces.

## Storage Of Gas

### First Attempt In Canada To Store Gas Under Ground

Calgary.—Successful storage of gas in a depleted field—the first known attempt in Canada to store gas underground—has been accomplished according to an announcement by P. J. Murch, general manager and director and chief engineer of the Canadian Western Natural Gas Light, Heat and Power Company.

The company has repressed the British Columbia gas field, Mr. Mellon said, and 8,000,000 cubic feet of gas had been stored in the field up to Dec. 31, 1935. Of 27 wells in the field, 18 were sealed and the nine others were recommissioned and made available for receiving and storing purposes.

Experiments were first carried out in the field, the engineer stated, and with these proved successful in raising gas pressure to 1,000 psi. At 1,000 psi, 600,000 feet of gas in eight wells raised the rock pressure 30 pounds per square inch, the Dominion government co-operated by issuing an order-in-council withdrawing the rights to file or drill in approximately 20 square miles of territory.

Admiral Viscount Mako Saito, former Premier of Japan, who has been installed as keeper of the Privy Seal—a post which enables him to become one of the chief advisers of the South African who had worked the machine.

Saito is a strong opponent of army dictatorship.

## OIL SANCTIONS PROPOSALS HELD IN ABEYANCE

LONDON.—In a London thick with gloom for the cabinet met to discuss the next move regarding proposed oil sanctions against Italy. It was the third cabinet meeting Anthony Eden has attended as foreign secretary.

Eden will attend the league council meeting at Geneva, he is expected to attend the Soviet Union's meeting with both the east and west, the government announced its military budget for 1936 will be more than double that of last year.

During 1935 the standing army was brought to approximately 1,300,000 men.

Russia this year will spend 14,000,000,000 rubles (\$2,800,000,000) on armaments, Foreign Minister Grigory Grinich, commissar of finance, announced to the all-Union central executive committee.

Proposed oil sanctions against Italy.

Last year the budget was 6,500,000 rubles, but the expenditures actually reached more than \$3,500,000,000 rubles.

Grinich announced 28,700,000 rubles will be used this year for construction work, a large part of which will go to the reconstruction of Moscow and Leningrad.

Factors entering into a more modified British attitude are: Recent negotiations with the U.S. in force against Italy are working better than anyone anticipated, thus reducing further action less urgent.

Doubts whether oil sanctions are the best way to prevent the extension of the existing Italian attack, the coming of the "little rainy season" in Ethiopia, and uncertainty about the attitude of oil-producing nations outside the League.

On the other hand, the waves of protest which swept over Great Britain against the Hoare-Laval peace plan last month was a warning which no government, however, can afford to ignore.

As a shareholder in the Anglo-Persian Oil Company—which counts Italy among its customers—the British government feels particularly compelled to continue its policy of non-intervention.

It was taken that if nothing is done on sanctions by the time of House of Commons re-assembles February 4, the opposition will launch a renewed campaign.

"Big surprises" are in store for all Britain when the cabinet's national defence plans are announced, the Manchester Guardian said.

Comments made by German representatives, which were recently received, indicated that the new plan had been increased by the allies' firms devoted by the Reich to its armaments," the Guardian declared.

## PRINCE BUYS A FANCY COSTUME

Here we see His Royal Highness the Prince of Wales leaving a famous London costumer's shop after being fitted with a fancy dress costume which he wore at a New Year's ball in London.

## EMPEROR'S ADVISER

### Lord Tweedsmuir Interested In Technical Processes Of Mineral Extraction

Kirkland Lake, Ont.—After visiting the Noranda mine, interesting himself in the technical processes of mineral extraction, the governor-general came to Kirkland Lake during his first visit to northern Ontario.

Much of what Lord Tweedsmuir saw at Noranda was new to him, but he learned many things through his extensive speaking by President J. Y. Murch and General Manager H. L. Ross of the mine, His Excellency was informed that one particular machine was something of an innovator in gold mining.

Lord Tweedsmuir deplored. He had seen the operation once in the 1930, but had forgotten it. He is 80 years old, he said, and he has never been able to place the date and the name of the man in South Africa who had worked the machine.

## May Protect Indians

### Old Treaty Covering Hunting Prohibited In Ontario Court

Waterloo, Ont.—A clause of what is believed to be the Jay treaty effected by Governor Simcoe in 1792 and stating that Indians may hunt in creeks in Canada, was produced in court here by R. A. Carseelan, lawyer defending two Indians on an illegal hunting charge. The result of the proceedings was uncertain.

Lord Tweedsmuir, who is president of the Supreme Court of Canada, reserved judgment in the case yesterday while he investigates the authority of the Jay treaty in relation to present day conditions.

## NAVAL PARLEY IS NOW CLOUDED IN UNCERTAINTY

London.—Japan walked out of the international naval conference and the future of limitation of naval armaments established fact for 13 years was clouded in uncertainty.

All delegations, save Japan, the Japanese made clear they wanted to maintain a naval building race. Nevertheless, in some quarters this was seen as an eventual possibility resulting from the breakdown of the conference.

Japan's walk out was because the four other powers and with them the British dominions represented at the conference refused to grant her demands for naval parity with Great Britain and the United States.

Abandonment of the parity by the Japanese was quickly followed by a veritable rain of statements and explanations from all delegations as to why the meeting had broken up.

Britain, the United States, France and Italy voted to continue in an attempt to work out a limitation agreement without Japan.

Germany, which had expressed in Britain and the American quarters that the Japanese might return to the conference and that the development would not harm relationships between them on other issues, was understood.

The British labelled Tokyo's proposal "suicidal" to the British Empire in the present state of the world.

The British position, it was said in authoritative quarters, was that while she has responsibilities in European waters, the Atlantic, Indian and Pacific oceans, she was asked to uphold all those responsibilities with that of a country concerned with one, or at the most two, of these seas.

Hitler at Berlin, however, declared from the Reichstag, he, it was said that it is plain to-day that the British navy is as necessary to defend collective security" as to defend its own country.

After the meeting an American spokesman said:

"We will join a four-power conference because we do not want a naval race."

"We really will have to consider a provision for some co-operation in case Japan or some other power starts building."

"There will probably be some escape clause in any agreement the four powers reach so as to take care of such contingencies."

## GRANTS THIRTY DAY REPRIEVE TO HAUPTMANN

Trenton, N.J.—Bruno Richard Hauptmann, convicted Lindbergh baby killer, was saved temporarily from the electric chair by a 30-day reprieve from Governor Hoffman.

It came 20 hours before the date of execution.

Lord Tweedsmuir, demurred. He had seen the operation once in 1930, but had forgotten it. He is 80 years old, he said, and he has never been able to place the date and the name of the man in South Africa who had worked the machine.

The reprieve, though only for 30 days, actually assures Hauptmann of at least eight more weeks of life and perhaps three months due to the fact it will be necessary to resentencing.

Governor Hoffman acted soon after the United States supreme court, in a one-sentence decision by Chief Justice Hughes, had denied Hauptmann's appeal for a writ of habeas corpus and a stay of execution.

There will be only the one reprieve, unless the evidence should warrant another," announced the governor. Hauptmann is finally to be saved if it must be the presence of sufficient new evidence to warrant Justice Thomas Tammend, who sat at Flemington, granting a request for a new trial in the case.

The governor announced his decision in his office shortly after talking with Mrs. Anna Hauptmann, who presumably had called upon him for a reprieve for her husband's life.

There was no formal statement by the governor, who spoke extemporaneously. He said:

"The attorney-general and I have been discussing this matter, and I have decided to announce a reprieve of 30 days."

"We have agreed that this will not be challenged."

"I am giving this reprieve for divers reasons which I do not care to disclose at this time. It is an act of executive clemency, and there can be no extension of the reprieve unless the evidence should warrant it."

"No formal request was made to me to grant one reprieve. There will be no further reprieve."

"I am giving this reprieve for divers reasons which I do not care to disclose at this time. It is an act of executive clemency, and there can be no extension of the reprieve unless the evidence should warrant it."

## Ontario Town Wrecked

### Natural Gas Supposed To Be Cause Of Explosion

Wheatley, Ont.—Natural gas, escaping from a heater, is believed to have caused the terrific explosion which shattered windows and caused damage estimated at \$50,000. Two persons returning from a party were knocked down by the blast and struck by the flying debris but were not injured.

Only a single wall remains of the building considered Wheatley's finest. The post office, village council chambers, Gillies funeral parlors, and lodges quarters were obliterated.

Gas and coal town records went up in smoke as fire ensued following the explosion.

Those villagers who were first on the scene say they saw four balls of smoke and flame burst through the roof of the building, and then the entire structure crumbled into a heap.

## Alaskan Cities Quarantined

### Mid Cases Of Scarlet Fever In Many Places

Anchorage, Alaska.—Anchorage police, the Queen City citizens, are scared for scarlet fever cases reported seven, all mild. The schools were closed and public gatherings banned.

Fairbanks and Palmer also have been quarantined for scarlet fever and tularemia.

Seward, Dr. A. D. Haverstock of the public health service, asked the coast guard cutter Morris to dispatch from Cordova to Port Graham where 15 persons were reported ill of an undetermined nature.

Port Graham is a fishing village on Cook inlet, near the tip of the Kenai peninsula.

## Will Conduct Survey

Halifax.—A reliable source said William Duff, Liberal member of parliament for Antigonish-Guyana, would leave soon for New York and Washington to conduct a survey of reactions to the Canada-United States trade agreement.

## Discover Origin Of Cellulose

Announcement By Women Scientists May Change Chemistry

Two women scientists announced solution of a major mystery of science—the origin of cellulose in a report of the American Association for the Advancement of Science.

Cellulose is the product of all trees and plants, used to make synthetic silks, paper and thousands of products which cause chemists to call this "cellulose age".

No one previously has ever been able to see how plants make their cellulose. The discovery is first step in a possible method of manufacturing cellulose partly by machine, which would make available limitless supplies of paper and clothing and many other cellulose products.

The microscopes of Mrs Wanda K. Parr, associate cotton technologist of the U.S. department of agriculture, and Dr. Sophie H. Eckerson spied out the origin of cellulose. Both work at the Boyce Thompson Institute for plant research at Yonkers, N.Y.

While examining fibres of cotton, 96 per cent pure cellulose, they saw nature's cellulose-making process in action in the cytoplasm of cotton cells.

Cytoplasm is a clear substance like the white of egg surrounding the nucleus of cotton cells, just as the white surrounds the pink egg. All living cells—man, plant or animal—have this same structure and similar cytoplasm.

The cells are visible only under powerful microscopes. Drifting in the cytoplasm of the cotton cells, the two women saw minute particles shaped like sausages balloons.

They worked together, took to each other out of end, or sometimes side to side. Close observation showed each balloon coated with a sticky substance, pectin.

The bead-like chains and sheet-like masses of balloons floated to the outside of the cytoplasm and made a wall there, a wall that by chemical analysis bears every test of being pure, newly formed cellulose. The women went down the cotton chain, subjected cotton atoms to various chemical tests and every bright added evidence that each particle was cellulose.

### Women Good Air Travellers

**Relax Quickly And Are Less Restless Than Men**

Women apparently make better air travellers than men.

The information showed up in a study of the needs and attitudes of air passengers made by a large air line in establishing a "ground school" where its passengers learn about airplane psychology, some basic economics of aviation radiations.

Some of the things the company learned about its clients, said Newton Wilson, instructor, and Stewardesses Grace Hall and Dorothy Johnson, who have flown nearly 800,000 miles, and Ruth Pethel, of Iowa City, Ia., with 400,000 miles in the air, were:

Women flying the first time require more time to get used to the air than men, but women calm themselves better; women are more careful for they where they put their cigarette ash; men don't smoke so much; an average woman, men ask more questions; men get restless quicker than women; male spouses are more fussy about the manner in which the woman ate.

A woman air ack (company's latest records showed only 50 passengers out of 21,000 get air sick) take it less seriously than men—and they take something to settle their tummies even if it does "taste awful" with less squirming than men.

### A Family Of Masons

Australian News Letter says it was probably an argument in Preston, England, that caused the death of a man. A Welsh knave took place at a meeting of the Dynamic Lodge in the Brisbane Masonic Temple, when W. Bro. James A. Boden, P.G.D., as acting master of the Lodge, informed the members that he had the craft in the presence of six other sons.

### Started Farm Contests

One hundred years ago King George the Fourth, of his own accord started a movement aimed at "encouraging honest and industrious labourers," as a result of which ploughing matches and similar contests were shortly afterwards instituted.

The forging of hands from knee to hoof corresponds with the middle finger of a man's hand.

Brush your loaf of bread with melted shortening before baking to get a fine even brown crust.

## MANSION OCCUPIED BY THE LINDBERGH'S IN WALES

Lindbergh home in Wales

An historic mansion at Cefn-y-Wales, top, formerly the home of Aubrey Morgan, brother-in-law of Anne Lindbergh, now the residence of Colonel and Mrs. Charles Lindbergh and their son, Jon, who was born there. Below, the colonel and his wife drove their automobile for a drive through the countryside, adapting to the narrow roads of the United States to those of Britain.

While examining fibres of cotton, 96 per cent pure cellulose, they saw nature's cellulose-making process in action in the cytoplasm of cotton cells.

Cytoplasm is a clear substance like the white of egg surrounding the nucleus of cotton cells, just as the white surrounds the pink egg. All living cells—man, plant or animal—have this same structure and similar cytoplasm.

**FLEMING'S FOLLY**

—By—  
LAWRENCE A. KEATING

#### STORYBOOKS

Here is an absorbing and exciting story of a fight against stubborn prejudice and a bitter personal malady—Fleming's Folly. It is full of ridicule, sabotage, bullets, and the treacherous—but would turn them against each other.

The story opens with Link Fleming and his mother making a visit to County Court to call together with the object of forming an irrigation company.

Roger Kilgo, the boss of the Rawhides and nearby ranges, who used to appear at the meetings, was equally opposed to it, had forced Soak Torrey, a derelict mining engineer, when Kilgo was away, to sign up and to give his expert opinion in favor of the scheme to reverse the water from the Bone coast so far as Hamilton's plan went, and to make a new-fangled way to waste money.

The meeting terminates, but Burd Hause, the lawyer, who had been left alone, stays behind and Helen asks Fleming questions about his life.

Link, the son of the Rawhides, accuses Fleming of trying to influence his sister and, as he asserts his own right to be left alone, Fleming in an uncontrollable fit of anger, but Burd Hause, who is a doctor, is sick in the stomach, and Fleming is uninjured. Burd is arrested. The doctor demands that he be released, his wife, Kilgo's Roger suggests taking Helen to her home, but she refuses to go with him, and when he instead, This incident causes Roger to declare open hostility to Fleming.

He begins to plot his revenge against the man who has caused him such trouble. He gets a gun and goes to his house, but when he finds Link and Kilgo staying and Helen asking him questions about his life, he is shocked. He is sick in the stomach, and Fleming is uninjured. Burd is arrested. The doctor demands that he be released, his wife, Kilgo's Roger suggests taking Helen to her home, but she refuses to go with him, and when he instead, This incident causes Roger to declare open hostility to Fleming.

Link, however, in irrigation could not be successful unless there was harmony between them. And Link's pulse sped faster—wasn't that genuine? When he returned to Parson's, he felt it hard to bring them together on a new basis. Roger considered himself practically engaged to her. When was her rest period about that?

Link believed in irrigation could not be successful unless there was harmony between them. And Link's pulse sped faster—wasn't that genuine? When he returned to Parson's, he felt it hard to bring them together on a new basis. Roger considered himself practically engaged to her. When was her rest period about that?

He despised himself for doing it, yet felt he must. Sheriff Stephen watched the tableau in silence. Fleming, who had been watching Roger briefly, then turned to Helen.

"Shall we start now?" he asked in a low tone.

As they rose, Link had an unaccountable suspicion that somehow Kilgo had hidden in the scene. He cast a sidelong glance at Helen and found her uncommunicative. When they reached Rawhides and were about to enter, the main street, Otoe Pierer emerged from his bank. He sighted the girl and beckoned.

"I suppose, but I forgot I have to stop you," said Mr. Pierer to Mr. Pepler.

"So I want to find out just what the condition of the 'Triple H' is, how much money we have and all that."

He considered offering to wait, but felt instinctively that she might pre-

fer to go on alone—or to have Roger, who rode with several others, a horse and mule team, escort her home, a home where she wanted to come in with me. Maybe you'd like to think it over real careful, now Kilgo, folks are so set against it."

Said Helen her pony, then smiled at him from the sidewalk. "I've decided to go into it. And I never back out of a thing, Link."

His heart leaped. It was true that he had been a fool to think his State crop would benefit him. But he was the local outfit to club with him for the erection of a dam to back up Silver Creek.

"So, when can we get down to bed rock on our proposition?" he asked.

"The thing should be started now so we'll get an alfalfa crop early next summer. If we wait till spring it'll be that much harder for a return," he said.

"About trying to buy me out so as to stop you from getting back into the game again?" Link grunted. "That's stretching the truth too, Roger."

His face lighted slowly with a knowing grin. "Shucks, I savvy! I know you're right and have a good talk. Remember what I told you, Helen?"

"About trying to buy me out so as to stop you from getting back into the game again?" Link grunted. "That's stretching the truth too, Roger."

His face lighted slowly with a knowing grin. "Shucks, I savvy! I know you're right and have a good talk. Remember what I told you, Helen?"

"About trying to buy me out so as to stop you from getting back into the game again?" Link grunted. "That's stretching the truth too, Roger."

He blushed and made no reply.

"But I'll tell him not to come to the ranch to-night. You come, Link, and we'll talk over all our plans for irrigation. Why not come early, for supper?"

The Box 50 owner, Benson and Sheriff Stephen, were waiting a few yards away. Fleming felt certain Kilgo had heard Helen's invitation. He could not restrain a thrill of triumph. Fine, fine!

Turning his mount, he started at a brisk trot toward the ranch.

Pierer, he knew, would attempt to talk her out of participating in what the conservative banker now regarded as an "unwise" scheme. Otto's idea was to talk Helen into the majority of local citizens believed he had discovered long ago that such a policy kept him in the good graces of influential men who might otherwise shun him in the bank presidency. Link hoped that Helen would not state her intention to Otto. As for Kilgo, he felt certain now the man could not persuade her out of it.

He stepped back in dismay. The suddenness of her defense of Kilgo brough him a sense of personal alarm. The banker's rather stern face, Fleming avoided her accusing eyes. Seemingly he had overstepped himself. The heightened sense of trouble brewing, with Roger as his chief antagonist, had perhaps, caused him to be indecisive.

"Ah, Link, let's forget it. Come on, what do you say?" The other shuffled forward warily, his voice throaty. Kilgo had heard Helen's invitation. Link eyed him an instant. Then his lids lowered and his voice sounded cold and controlled.

"That's just a grandstand play, you know. There's no friendship between us."

He turned on his heel and started off. But with a gasp Helen hurried after him and seized his arm. "Link, if you won't be friends—If you won't be friends—"

"Wait a minute, Helen. I'm afraid you will have made a choice. Roger is a good friend of Buzz, and he has been a good friend to me."

"Well, when you—I mean, well—almost anyone who is a man is willing to forgive and forget. Are you trying to make trouble?"

He turned on his heel and started off. But with a gasp Helen hurried after him and seized his arm. "Link, if you won't be friends—If you won't be friends—"

On the way to town he tried to pretend complete indifference to her words and more were a mere mask of his true feelings. But Helen's meaning was clear: she was insistent in her desire to return to the ranch. Perhaps she felt it hard to bring them together on a new basis. Roger considered himself practically engaged to her. When was her rest period about that?

A harmonious relationship in irrigation could not be successful unless there was harmony between them. And Link's pulse sped faster—wasn't that genuine? When he returned to the Johannastrasse municipal museum, the solid back tires were the original ones.

"Shall we start now?" he asked in a low tone.

As they rose, Link had an unaccountable suspicion that somehow Kilgo had hidden in the scene. He cast a sidelong glance at Helen and found her uncommunicative. When they reached Rawhides and were about to enter, the main street, Otoe Pierer emerged from his bank. He sighted the girl and beckoned.

"I suppose, but I forgot I have to stop you," said Mr. Pierer to Mr. Pepler.

"So I want to find out just what the condition of the 'Triple H' is, how much money we have and all that."

He considered offering to wait, but felt instinctively that she might pre-

# Mr. CAFFEINE-NERVES finds out who is boss

MANY PEOPLE, of course, can safely drink tea and coffee. There are thousands and thousands of others who cannot. And, without realizing it, you may be one of these.

The caffeine found in both tea and coffee may be worked night and day to keep you alert, yet your digestion becomes more nervous system.

You suspect that tea and coffee disagree with you... switch to POSTUM for 30 days. Postum is simply wheat and bran, roasted and slightly sweetened. It is a natural product that can't possibly harm you. It is economical and easy to prepare.

**FREE**—Let us send you your first week's supply of POSTUM—**FREE**. Write for it to Consumer Service Dept., General Foods, Limited, Cobourg, Ont. Pg. 13

#### Unified Air Express

Will Cover United States and Part Of Canada

#### Smallest Coin In Panama

Media Two Cents Used By Poor

There is a Panama coin consisting of a two cent piece worth 2 cents, there being no 1-cent pieces. The coin is used extensively by the poorer classes of the population. All goods capable of being reckoned in cents to save time are quoted at that unit. This is particularly the case with biscuits of the cheap sweet variety which are very much in favor with the native population. The United States takes the greater portion of trade, while Great Britain caters to the demand for fancy or more expensive types of biscuits. Canada enjoys a comparatively small share of the trade, however, according to the Industrial Department of the Canadian National Railways. There is somewhat limited domestic production of cheap sweet biscuits, however, and less than half as much as a side-dish. There is a steady and considerable consumption of soda biscuits, largely among the native population.

#### Little Helps For This Week

#### Hard Year For Trappers

For Catch Less Than Last Season What Was Paid

That some system of relief for Indians and trappers operating in northern Saskatchewan lands will be essential unless trapping of beaver is to become impossible, salvation, Isaiah 12:1.

Twenty-five thousand Indians and trappers in the north and Pan American Airways. They have signed contracts with the Railway Express Agency for the service which is to be inaugurated February 1. A door-to-door pick up and delivery service, covering 32 cities in the United States and Canada with a population of 40,000,000, and through the Pan-American Airways system, with 22 cities.

It was also pointed out that the air express system, started in 1917, has grown until in 1935 2,240,000,000 pounds were flown, handling an estimated total of 2,400,000 pounds of express.

In the new set up a pound of express may be transported across the continent by any route for 6¢ a pound.

Africa's Oldest Motor Car

The oldest motor car in Africa, a four-horsepower vehicle made in England, was presented to the British Museum.

Marie: "Are they in love?"

Manie: "They must be. She listens to him describe a ball game and he listens to her telling how her cousin's new dress was made."

Zendo City got its name from the Aztec god, Mexitl.

#### Instant Relief For Movies

The Austin tobacco monopoly has been granted a permit to print pictures of games of chance.

Within the first month of last year, a report from Vienna states, it's just been announced that in honor of this sporting event smokers in Austria will be given a chance to have "Olympia" cigarettes and cigarettes.

Mexico City got its name from the Aztec god, Mexitl.

#### Instant Relief For Itching

Are you tormented with the ouches of eruptions, eczema, scales, rashes or other skin afflictions? For quick and happy relief, apply D. D. Prescription. Its gentle oils soothe and cool the inflamed skin, thus aiding nature to heal the sore.

It is a non-oily, non-greasy lotion, so it won't stain clothes. It is a non-oily, non-greasy lotion, so it won't stain clothes.

# TOWN & COUNTY Personalographs

Ray Davidson of Three Hills was a visitor in town on Tuesday.

Mr. and Mrs. S. F. Torrance motored to Calgary on Wednesday and expect to return Friday.

Mr. and Mrs. C. H. Nash, Mr. and Mrs. C. Frisens and Mr. and Mrs. J. Smith motored to Carstairs on Sunday and spent the day with Mr. and Mrs. E. Sellen.

More snow has fallen in the district during the past week and farmers report that about two feet of snow rests in many fields at the present time.

Geo. Wise of Calgary came out last week and spent a few days in Carbon. He returned to the city on Wednesday.

Dick Gimbel has a new Chevrolet half-ton truck purchased through the Garrett Motors. We understand that Geo. Trepunier is also negotiating for a similar vehicle.

A number of Carbon rinks expect to take in the Drumheller bonspiel next week.

A. McElville Anderson of Anderson & McLean, sight specialists, Calgary will make his next visit to Carbon on Tuesday, February 4 afterwards only.

Sunday, February 2nd being the fifth anniversary of the opening of the Anglican Church in Carbon, a special service will be held at the Church at 11 a.m. instead of the usual time of 7 p.m. Rev. S. Evans will officiate.

C. H. Nash put out another bunch of circulars this week advertising a special line of fancy groceries.

A special memorial service for late sovereign, King George V, was held at the Anglican Church on Tuesday morning at 11 a.m. The Duke of York and Lady Roberts Chapters I.O.D.E. attended the service in a body and marched in procession behind the flag-draped church. Each member was given a patch of purple ribbon under the bunting of the order in respect for the late King. The service consisted of songs and prayers and was conducted by Rev. S. Evans.

**THE COW**

As conceived by a City Man Who Studies Architecture

The cow is a female quadruped with an alto voice and a countenance in which there is no guile.

She is the name of the name in the production of a liquid called milk, provides the filler for hash, and is at last skinned by those who have benefited, as mortals commonly are.

The young cow is called a calf, and

has a universal form, is used to disrupt marching files, and a tassel at the end has unique educational value. Persons who milk cows and come often in contact with the tassel have vocabularies of peculiar and impressive force.

The cow has two nipples. The one on the right side is used as a warehouse and has no other function. When this one is filled the cow retires to a quiet place where her ill manners will occasion no comment and devotes herself to belching. The raw material thus conveyed for the cow's digestion is delivered to the anterior stomach where it is converted into cow.

The cow has no upper plate. All her troubles are concentrated in front of her face. This arrangement was perfected by an expert to keep her from biting up things. As a result she bites things up and down.

The slice of cow is worth eight cents in the cow, fourteen cents in the hands of the packer, and \$2.10 in a restaurant that packages it in atmosphere.

P.S.—The male cow is called a bull, and is lassoed along the Colorado, found south of the Rio Grande, and shot in the vicinity of the Potomac—The Cow Bull.

**TAKING CARE OF COMMON COLD**

To relieve a cold we need to do is assist nature in eliminating poisons. This, the medical says, may be done in six ways.

By increasing elimination through the bowels by the use of an enema.

By increasing elimination through the skin by a hot bath.

By increasing elimination through the kidneys and skin by drinking freely of lemonade made without sugar.

By increasing elimination through the lungs by getting all the fresh air possible.

By eating only fruit juices, lemon juice and grapefruit. The old idea of feeding a cold to keep up the strength is a delusion.

By resting in bed.

When one considers all the cases of pleurisy, pneumonia and tuberculosis which are directly attributable to colds, he should think that people would not be so careless in spreading colds or that they would exercise more precautions in overcoming such an affliction. The similarity of most diseases speaks the majority of colds if not left untreated will present much needless suffering from later complications.
